Frontend developer

A frontend developer provides simple solutions to complex problems in real projects

Profile

As a frontend developer specializing in React, I am interested in creating modern and user-friendly web applications. I have experience in frontend development, UI/UX, and solving real business problems through technology. Additionally, I actively participate in team work and project management, developing effective solutions for various digital projects. I also consider continuous learning and development important. Currently, I am enhancing my skills in the React ecosystem and modern frontend architecture while working on world-class products. My future goal is to work in a strong international team, participate in large projects, and create real value through technology.

Areas of Expertise

- ReactJs
- NodeJs

Accomplishments

[National Ai Hackathon 2026](#)

Professional Experience

Zamon Digital Tech, Fergana, Mar 2025 to Present

Frontend developer

[zamon-agency.uz](#)

Frontend developer. I work with React, JavaScript, and modern web technologies. I have experience in creating user-friendly, responsive, and efficient web applications in real commercial projects. I strive to solve problems, work with a team, and continuously improve.
